

Emenda becomes reseller for Codenomicon in the fast growing UK security and quality market

Codenomicon has chosen Emenda as a strategic partner in all largest security markets in Europe

LONDON, UK & OULU, FINLAND - July 7th, 2009 - Codenomicon and Emenda are pleased to announce an extension of their partnership. Under the new agreement Emenda will resell the Defensics product family of Codenomicon in the UK alongside Codenomicon's direct sales team. Adding Codenomicon Defensics into their offering will enable Emenda to provide all aspects of proactive product security tools for their customers.

Emenda CEO, Neil Langmead, welcomed the new agreement: "We're pleased to take on a role with Codenomicon in the UK. Defensics is an exciting tool and we're confident there will be as much interest for it in the UK as there has been throughout the rest of Europe."

Codenomicon's Director of European sales, Ari Knuuti, was equally positive about the agreement, saying, "We're glad to be able to work with Emenda in the UK market. Emenda's expertise as a technical Value Added Reseller has greatly benefited Defensics customers across continental Europe, and we are equally confident of their success in the important UK market also."

Since 2001, Codenomicon has been providing proactive security assessment tools and services for leading European service providers and manufacturers in telecommunications, finance and critical infrastructure. Codenomicon focuses on black-box testing solutions, fuzzing tools, which aim at breaking the security of communication without any access to the source code.

Emenda has been a value added reseller of Codenomicon since July 2008, and its main focus has been on distributing Defensics in mainland Europe. After the new agreement, Emenda is reselling Codenomicon Defensics in the following markets: UK, Germany, Austria, Switzerland, France and Belgium.

About Codenomicon Ltd.

Codenomicon makes security and quality testing software that allows the user to quickly find and identify both known and previously unknown flaws before business-critical products or services are deployed. Their unique, targeted approach to Fuzz testing of networked and mobile offerings exposes more flaws and weaknesses than any other testing platform or methodology. Companies rely on Codenomicon's solutions to stop threats such as Denial of Service (DoS) and Zero Day Attacks that increase liability, destroy business reputations and cripple sales. About Defensics

Codenomicon Defensics is the market leading proactive fuzzing tool. Latest release of Defensics includes several new features. The improved test coverage and efficiency will result in better test results in less time. Test case editing enables you to customize and add new test cases. XML anomalization engine extends testing to new XML-based application protocols and file formats. Instrumentation script library integrates the Defensics products into any test controller, target system, or monitoring framework. End-to-End test engine will enable you to test the security and robustness of firewalls and complex networks through distributed test setup. Vulnerability validation capabilities will reproduce any found problems effortlessly and accurately in any test environment.

About Emenda

Based throughout the heart of Europe, Emenda specialises in the provision of software testing tools and consultancy services for the development and verification of safety critical, business critical and high integrity software systems, to customers worldwide. The name Emenda derives from the Latin to improve or make free from errors. Emenda's goal is to help implement rigorous testing strategies and recommend tools that improve the quality of software produced and minimize the risk of software defects escaping into the field.
